

## 2.7 Developing an Application

This section gives a detail explanation on stack, peripherals and other documentation.

After completing the installation of tool chain and Harmony components as mentioned in [Getting Started with Software development](#), refer the following documentation to start developing an application :

1. [BLE Stack Documenation](#): Guides user on what APIs are required to implement wireless BLE application.
2. [Device Support Library Documentation](#): It gives common system services like device driver library, persistence data server library, standalone bootloader and Bootloader services. These services are created as components in Harmony.
3. [Application Example Documentation](#)
  - [Develop App examples from scratch](#)
  - [Advanced Applications](#)
4. [Adding Chip Peripherals to Application](#)
5. [Device Firmware Upgrade](#)
